

Watt's New

Solar updates, industry news, and more

Welcome back to Watt's New!

We're starting the new year with a focus on smart planning and strong foundations. In this edition, we're excited to introduce our new partnership with Pinnacle Roofing, designed to make roof and solar projects work seamlessly together. We're also sharing why winter is actually one of the best times to start planning your solar project — so you're ready to take full advantage of spring sunshine and net metering as soon as the season begins.

New Year, New Partnership: Solos Energy × Pinnacle Roofing

We're thrilled to announce **Solos Energy** has officially partnered with **Pinnacle Roofing** to deliver a more seamless, coordinated experience for BC homeowners considering solar. Whether you're replacing an aging roof or planning ahead for solar, this partnership brings two trusted local experts together — so your roof and solar system are designed to work together from day one.

Who Is Pinnacle Roofing?

Established in 2003, [Pinnacle Roofing](#) is one of the Okanagan's most reputable and established roofing companies, serving Kelowna, West Kelowna, Penticton, Vernon, and surrounding communities. Their team specializes in residential and commercial reroofs, repairs, and new construction, with a reputation built on quality workmanship and dependable service. They've built one of the strongest reputations in the region through consistent craftsmanship, experienced crews, and customer-first service. Pinnacle Roofing has also been voted Kelowna Now's Best Roofing Company for the 10th year in a row (2016–2025) — a recognition that reflects their consistent quality and trust across the community.

When a Solos customer needs a roof replaced before solar, Pinnacle is the team we trust.

Why Now Is the Best Time to Start Planning Your Solar Project

It might feel early to think about solar in January — but starting your planning now can make a big difference in how much you benefit later in the year. From design and permits to utility approvals and scheduling, solar projects take time. By getting started in the winter, you set yourself up to have your system installed and producing energy right as spring sunshine ramps up. In fact, in the Okanagan, solar systems can begin generating excess power as early as March, allowing you to start building net metering credits sooner — credits you'll use during lower-production months later in the year.

What the Solar Process Looks Like at Solos Energy

We believe going solar should be simple, honest, and hassle-free.

Here's how it works:

1. Collect Info

Share your address, recent utility bills, and a photo of your electrical panel. Our team uses this to create a custom solar proposal designed specifically for your home or business.

2. Review Your Proposal

One of our solar experts will walk you through a 3D system design, pricing, and performance estimates, so you know exactly what to expect.

3. We Handle Everything

Permits, paperwork, utility coordination, and materials — we take care of it all, so you don't have to.

4. Let Solar Power Your Future

Our experienced crew installs your system with precision, getting you up and running with clean, renewable energy and long-term savings.

Don't Wait for Spring — Be Ready for It

Starting your solar journey now means:

- ☀️ Your system is ready to produce as soon as spring sunshine arrives
- ⚡ You can begin earning net metering credits earlier in the year
- 🔧 You avoid the spring and summer installation rush
- 📈 You maximize your annual energy production

If solar is on your radar for 2026, now is the best time to take the first step.

Reply to this email or call **(250) 258-8344** to start your solar plan today.

That's a wrap!

We'll see you in the new year for the next edition of Watt's New.
