

Watt's New

Solar updates, industry news, and more

Welcome back to Watt's New!

Summer is in full swing, bringing longer days, warmer weather, and increased energy usage for many homes and businesses. In this edition, we're talking about making the most of summer energy, why this season continues to be a great time to explore solar, and how the right system can help support long-term savings and energy independence.

Making The Most of Summer Energy

Summer often brings some of the highest electricity usage of the year. Between air conditioning, irrigation systems, pool equipment, and longer daytime activity, many homeowners and businesses notice increased energy consumption throughout the warmer months. At the same time, summer also brings some of the best solar production conditions of the year, with long daylight hours helping systems generate strong, consistent energy output.

For many homeowners and businesses, that combination makes summer an ideal time to start exploring how solar can support long-term energy goals.

Summer Energy Demand Meets Peak Solar Production

One of the biggest advantages of solar is that your system generates electricity during the daytime hours when summer energy usage is often at its peak. The electricity your system produces is first used directly within your home or business, helping reduce the amount of energy you need to purchase from the grid.

Whether your goal is lowering monthly electricity costs, offsetting future energy usage, or gaining greater energy independence, solar continues to provide long-term value well beyond the summer season.

A Long-Term Investment in Your Home

Solar isn't just about summer savings, it's a long-term investment in your home or business. Modern solar systems are designed to provide decades of clean energy production while helping reduce electricity costs and provide greater protection from rising utility rates over time. With customized system design, premium equipment options, and ongoing monitoring and support, our team is here to help ensure your system continues performing for years to come.

Going Solar Is Simpler Than Most People Think

One of the most common things we hear from customers is surprise at how straightforward the process actually is.

At Solos Energy, we've built our process around making solar simple, honest, and hassle-free from start to finish.

1. Share Your Information

We collect your address, utility bills, and a few photos so we can understand your property and energy usage.

2. Review Your Custom Proposal

Our team walks you through a customized solar design, projected production, system layout, and pricing.

3. We Handle the Details

Permits, utility applications, materials, and installation coordination — our team takes care of it all.

4. Start Producing Clean Energy.

Once installed, your system begins generating clean, renewable energy designed to support long-term savings and energy independence.

Thinking About Adding Solar To Your Home or Business?

Whether you're exploring solar for the first time or looking to learn more about the latest equipment options available, our team is always here and happy to help.

That's a wrap!

Stay tuned for the next edition of Watt's New.

REFER & EARN!

- REFER A FRIEND, FAMILY MEMBER, OR COLLEAGUE TO SOLOS ENERGY USING OUR REFERRAL FORM
- THEY SIGN UP FOR A SOLAR SYSTEM WITH US AND GET INSTALLED
- ONCE THEIR SYSTEM IS SUCCESSFULLY INSTALLED, YOU EARN A \$300 REFERRAL FEE!

solosenergy.ca/REFERRAL-PROGRAM

We're here to help you make the switch to solar!
